

MicroScan recording Balance Software

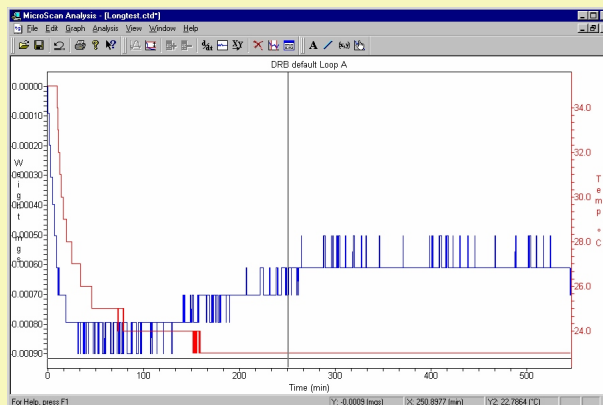

MicroScan is a Data acquisition and analysis package for use with the Thermo Cahn Digital Recording Balances. It is Window 2000 compatible and its modern layout is designed for easy operation. It features:

- Up to 999 hours of continuous collection of data
- Sample rates from 1 Sec. to 1 per hour
- Recording of Temperature with the Weight data
- Compatible with any Cahn Digital balance
- Import of Cahn DOS format files
- ASCII import and export

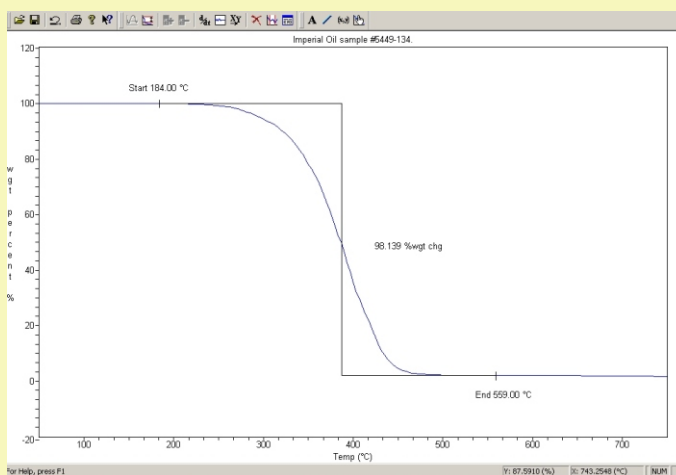

In addition to weight, temperature can be recorded and stored for later analysis. MicroScan can collect temperature data from the old Cahn modules or the newer Omega controllers

The analysis portion of the software is based on the powerful Thermo Cahn Thermal Analyst TGA software for flexibility and quick analysis. For added compatibility, import of older Cahn data files is provided
